NOTICE

RE: Clarification of EHC Applicable Filters

Dear Salutation,

As a result of the compliance review process conducted by KPMG for the Alberta Used Oil Management Association, Saskatchewan Association for Resource Recovery Corp. and Manitoba Association for Resource Recovery Corp. (the Associations), it has become apparent that some inconsistencies exist in the remittance of The Environmental Handling Charge (EHC) for the following filter types:

- Sump Type Automatic Transmission Filters
- Plastic / Paper Element Style Filters
- Fuel Filters used at Retail and Commercial Pump Islands

The Associations advise that all of the above filter types must be included in your EHC remittances consistent with size categories. No change is required if you are currently remitting EHCs on these filter types.

If you are not remitting EHCs on these filters you are required to do so by July 1, 2003 on a go-forward basis. If this change in EHC remittance is not made by July 1, 2003, the Associations will have no alternative but to assess an EHC charge based on your sales of these filter types retroactive to the beginning of the program.

If this notice affects you, your compliance with this request is urgently required. Please contact any of the Association offices if you have any questions.

Sincerely,

Phil Wrubleski
